Template: Sprint Review & Retrospective – Lessons Learned

Completed in Sprint #3 (v2.2.0):

- Implemented "💾 Save This Session" feature
- Generated unique record ID and timestamp per session
- Used `DatabaseManager` to save both transcript and curriculum
- Displayed confirmation to the user (toast message)
- Scaffolded `.env` and connected Supabase

Retrospective – Lessons Learned

What went well:

- The `DatabaseManager` abstraction worked across all views
- Integrating Supabase was smooth once schema was defined
- Saving session data made the app feel more complete

What could be improved:

- We underestimated auth complexity: integrating Supabase Auth needs clearer story breakdown
- Missing a few frontend tests for the new session logic. We'll handle this in parallel with Sprint 4

Story Points Completed: 13
Velocity Indicator: On track, but we'll slow down slightly to accommodate new authentication logic in Sprint 4.
