

Subject Planner

Subject code and title: ITW601 – Information Technology - WIL

Subject length: 6-weeks; 12 Weeks

Subject Description:

This work-integrated learning (WIL) subject is designed to provide students with an opportunity to undertake a significant ICT project in a professional environment. This experience will enable students to develop skills that enhance their prospects of gaining meaningful employment and build their future career. WIL expands upon the students' learning environment while they are studying, allowing them to see first-hand how their learnings translate into 'real-world' practice. There are two WIL options available to students:

Option 1: Industry Placement

Students are offered the opportunity to undertake an industry placement at an organisation in a suitable ICT position. This encourages them to build long-term relationships with the tech industry and provides an opportunity for them to work with and learn from people who may end up becoming colleagues, managers or mentors. It also provides a context in which to enhance their communication skills and work collaboratively in a professional context. Students will undertake a series of industry-led tasks that are relevant to their field of study in order to understand the key concepts of working in and managing a professional technology team with emphasis placed on the operation of the environment.

Option 2: Industry Project

Students respond to criteria set within the context of an industry project. An understanding of research methodologies appropriate to professional practice and the documentation of personal creative investigation will be explored. Students will also further investigate and

examine entrepreneurial and commercial opportunities through collaborative work practice. Students draw upon the philosophical, practical, methodological, theoretical and technical tools they have utilised over the duration of their degree to successfully complete an industry project. Students are mentored through this project with complementary practice-based expertise. Projects must pertain to the field of ICT. The subject is delivered from a cross discipline perspective and draws on both specialised and common industry practices.

All projects must include evidence of critical analysis, reflexive and reflective practice and social engagement, in addition to the use of contemporary industry standard tools and techniques.

Students are required to work both independently and as part of a collaborative team in order to conduct research, analyse and define project parameters and deliver innovative solutions.

Subject Learning Outcomes (SLO):

SLO a)	Critically evaluate a problem within the ICT body of knowledge, including appraising established theories and recent industry developments.
SLO b)	Devise a structured enquiry-based ICT project relevant to professional practice with the use of appropriate principles and methods, and with a suitable level of personal autonomy and accountability.
SLO c)	Communicate effectively in ways appropriate to the discipline, client, audience and purpose.
SLO d)	Apply a systematic process of problem solving to identify and assess a real world need and propose an appropriate ICT solution to the problem.
SLO e)	Critically reflect on personal and professional experiences to engage in independent development beyond formal education for lifelong learning.

Delivery Schedule:

	Module	Learning Activities e.g. Blog Activity / Discussion Forum / Knowledge Check / Personal Reflective Journal	Assessments Due	SLOs addressed
1	Introduction to WIL	Introduce Yourself. Introduction to the subject. Why this subject is important? Detailed overview of Assessments options, timelines, subject goals.		a), b)
2	Australian IT Governance and Regulations	What are the Australian Governance laws? Data Privacy policies. Security and Technology Standards.		b), d)
3	Ethics in Professional Environment	How essential is Ethical thinking for IT professionals? What are the professional practices for IT professional environments? What is Code of Ethics and Professional Conduct? Introduction to Organisation and Requirements Collection Discussions on Assessment 1.		b), e)
4	IT Project Management	Students will learn about the management of projects, and the different roles and responsibilities in any projects.	Assessment 1 25%	b), d)

		Why is it important to define processes for the successful completion of a project? Why is Documentation important? Apart from technical skills, why the management skills are necessary to be successful?		
5	Decision making and Problem-Solving skills in Project Management	Students learn the power of decision making. Students further learn the process of problem solving and providing solution. Is Time Management essential in managing an industry-based IT project?		b), c), d)
6	IT Process and Industry	Student learn to differentiate Project and a process. Know-how of IT policies and procedures to establish guidelines for use of IT in industry. What are IT processes and workflows? Importance of Information Security Framework.		a), b), c), d), e)
7	Communication techniques in tech environment	Students learn the importance of communication techniques and how to communicate effectively with the stake holders. Role of communication in transitioning from technical professional to manager.		c), d)

8	Business – Related Models for IT projects	What is the method and models used across IT project's life cycle? The students get to know the importance of forecasts vs budgets. The project balance sheet and risk values are also highlighted.	Assessment 2 35%	a), b), d)
9	The Role of Quality in IT Projects	Students learn the effectiveness of quality processes. Further they learn the process approach to quality and its effectiveness. Cost of quality is emphasised.		a), b), c), d), e)
10	Reporting in professional practice	Students get to learn the relative importance of professional practice and engineering management competencies. Further they get to learn the role contracts play in systems-based project environments and how they are integral to being 'industry ready'.		a), b), c), d), e)
11	Job Readiness Skills for IT Professionals	Skills required for securing a job. Hard skills vs Soft Skills. Career advice.		a), b), e)
12	Future of the IT industry	What is the future of IT. How to select a career path in IT keeping in mind the future. Activity around entrepreneurship.	Assessment 3 40%	a), b), e)

Time Management:

Below outlines the minimum time management expectations for students.

12 Week Delivery:

- 10 Hours per module (one week): Facilitated study: 3 hours / week. Personal Study: 7 hours / week.
- 3 hours facilitated study consists of attending class, responding to facilitator feedback.
- Students are to allocate 7 hours of personal learning. This includes essential time spent on pre-reading and viewing materials, assessment progression and learning activities.

6 Week Delivery:

- 10 Hours per module: Facilitated study: 3 hours / module. Personal Study: 7 hours / module. (Typically 2 modules per week).
- 6 hours facilitated study consists of attending class, responding to facilitator feedback.
- Students are to allocate 14 hours of personal learning. This includes essential time spent on pre-reading and viewing materials, assessment progression and learning activities.

Learning Activities:

There are learning activities in each module with the types of activities listed in the delivery schedule above. These activities are an essential component of the subject and they are designed to prepare you for your graded assessment tasks. These learning activities will help you to build your understanding and skills whilst also collaborating with your peers.

***Detailed information of each activity can be found in their corresponding Module page in MyLearn.**
